FIND DATA · LEX

Legal Data · Intelligent Applications · Domain Models — fully self-hostable

The vertical platform for the legal industry: contract intelligence, legal retrieval, judgments and authoritative corpora — one platform, directly callable by AI agents.

Contract intelligence — assembled from a clause library, not invented

Assembly-based drafting

- Rooted in the **19** typical named contracts of the Civil Code [N13] and the practical contract taxonomy
- A clause library grounded in **5,000+** official template contracts [N12] — every draft is traceable
- Pick contract type, stance and scenario; drafts render to Markdown / Word / PDF

Triple AI review

- Legal, commercial and completeness dimensions run in parallel
- Feedback precise to the individual clause
- Criterion-by-criterion rubric scoring, with version comparison and regression testing

Statute grounding & agent access

- Drafts can carry article-level citations retrieved from **32,296** PRC laws and regulations [N1]
- **52** MCP tools expose the full capability [N14] — agents draft and review inside a conversation

The legal data foundation — one semantic layer; agents ask by concept

Scale (measured at the database)

- **32,296** PRC laws and regulations, with article-level citation resolution [N1]
- **37,001,012** court judgments [N3][N4]
- **30,151** authoritative documents: regulations / treaties / supervisory rules / party regulations and more [N6]
- **278** SPC guiding cases plus 15 batch notices [N5]
- **364,916** statute chunks for semantic retrieval [N2]

Purpose-built legal models (built into the platform; head-to-head on our own evaluation set)

Metric	General baseline	Lex legal model
Review accuracy	10.9%	**84.4% [N8]**
Structured-output validity	38.5%	**100% [N9]**
Per-item latency	27.3 s	**10.2 s [N10]**

- Separate legs for drafting and review; the baseline's failure modes (generic reasoning, no valid structure) disappear after fine-tuning [N11]

Three ways to start

Hosted platform

Sign up → mint a long-lived key in the console → call immediately. Usage and billing are visible in real time.

Agent access

Standard MCP protocol; one authentication covers everything. Endpoint `lex.finddatatech.cloud/mcp`, works with mainstream MCP clients.

Private deployment

A full-stack delivery package for your own machine room — data never leaves your domain. Planned capabilities are labelled v1.x; see the architecture sheet.
